

Data view web part

Annotations:

- Filters is collapsed by default and only appears if any filters are defined.
- Click to sort on specified columns.
- DSN can either be a connection string or refer to a connection string key in web.config if the web.config checkbox is selected.
- Where conditions - use @parameter to take values from a web part connection (if present) or from ASPWeb.AllProperties if no connection or the key couldn't be found.
- Specify column headers as overrides. If blank entry for column, uses column name from data set.
- Paging uses server side paging, not DataSet paging. ID Wraps the generated SQL in a WITH statement and injecting ROW_NUMBER() is necessary.
- Extra columns defined can be defined, which will be rendered into the output. Define extra columns, one per line as:

```
columnid: templateText
```

 templateText will be searched for any #FieldName# values and replaced with the value from the data.

Filter types:

- where filter (specify a field list, allow multiple where fields)
- sqlfilter (specify a fixed list, allow no selection)
- text (text based filter output)
- pagination (page of output)
- checkbox (specify id to get a list, allow multiple where fields)
- checkbox (specify id to get a list, allow no selection)

Filters are defined as XML:

```

<?xml>
<filters>
  <filter column="someColumn" type="selection">
    <!-- type specific parameters -->
  </filter>
</filters>
    
```
